-

2 GITHUB COMMANDS

shows all the configurations of github *gitconfig --list*

link for Endnote and Latex <https://www.rhizobia.co.nz/latex/convert>

2.1 Fix the Personal Access Token

Ref:

<https://stackoverflow.com/questions/68775869/support-for-password-authentication-was-removed-please-use-a-personal-access-token>

From August 13, 2021, GitHub is no longer accepting account passwords when authenticating Git operations. You need to add a PAT (Personal Access Token) instead, and you can follow the below method to add a PAT on your system.

Create Personal Access Token on GitHub:

- From your GitHub account, go to Settings.
- Developer Settings
- Personal Access Token
- Generate New Token (Give your password)
- Fillup the form => click Generate token
- Copy the generated Token, it will be something like *ghp_sFhFsSHhTzMDreGRLjmks4Tzuzgthdvfsrt*

Now follow below method based on your machine:

- For Windows OS:
 - Go to Credential Manager from Control Panel
 - Windows Credentials
 - find git:https://github.com
 - Edit, on Password replace with with your GitHub Personal Access Token
 - You are Done
 - If you dont find git:https://github.com

- * Click on Add a generic credential
- * Internet address will be `git:https://github.com`
- * Fill username, password is your GitHub Personal Access Token
- * Click Ok and you are done.
